Plain Language Summary The Editors and Staff of *Earth and Space Science* acknowledge the importance of hundreds of peer reviewers who contributed to the scientific rigor of the papers published in the journal. The Editors wish to publicly recognize the 839 reviewers who gave selflessly of their time and expertise in 2022.

On behalf of the Editorial Board and Staff of *Earth and Space Science*, I thank the reviewers whose selfless dedication has ensured that the papers published in our journal in 2022 are an outstanding representation of the best research in geophysics, planetary, and space science. Peer-reviewing is a demanding and often thankless job. It is however an essential component of the scientific process, requiring the highest standards of integrity and rigor. Reviewers check data and procedures and test reproducibility of methods and results; they share their expertise to verify that the interpretations and conclusions of a paper are consistent with assumptions and existing knowledge. Without this essential work it would not be possible to trust in the scientific process. Our journal, *Earth and Space Science*, is a multidisciplinary journal that highlights methods, instruments, data and algorithms, and we rely heavily on the direct expertise of our reviewers to verify and vouch for the quality of the papers we publish. We are indebted to all our reviewers and are delighted to acknowledge them publicly in this Editorial.

Reviewers' List

In 2022 *Earth and Space Science* received 512 submissions, publishing 293 articles. We received 1,179 peer reviews by 839 individuals, many of whom provided multiple reviews. Their names follow. *Italicized* names indicate individuals who provided two or more reviews.
